Sequence 1, Application US/08962034

Patent No. 601541

GENERAL INFORMATION:

TITLE OF INVENTION: PEPTIDE DERIVATIVES OF TACHYPLESIN

TITLE OF INVENTION: HAVING ANTIMICROBIAL ACTIVITY

NUMBER OF INVENTION: HAVING ANTIMICROBIAL ACTIVITY

CORRESPONDENCES:

CORRESPONDENCE ADDRESS:

ADDRESSEE: Bell Selfzer IP Group of Alston & Bird

STREET: NC

COUNTRY: US

ZIP: 27622-1107

COMPUTER: IBM PC COMPATIBLE

OPERATING SYSTEM: PC-DOS/MS-DOS

SOFTWARE: Patentin Release #1.0, Version #1.30

COMPUTER: IBM PC COMPATIBLE

COMPUTER: IBM PC COMPATIBLE

COMPUTER: IBM PC COMPATIBLE

COMPUTER: SYSTEM: PC-DOS/MS-DOS

SOFTWARE: Patentin Release #1.0, Version #1.30

CLASSIFICATION NUMBER: 35.943

FLICATION NUMBER: 35.943

REFERENCE/OFCKET NUMBER: 5718-19

TELECOMMUNICATION INFORMATION:

NAME: SPLAIDIN INFORMATION:

TELEFRAX: 919 881 3175

INFORMATION FOR SEQ ID NO: 1:

SEQUENCE CHARACTERISTICS:

LENGTH: 17 amino acids

TYPE: amino acid

STRANDENESS: single

TOPOLOGY: Linear

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

A; Title: Cloning and characterization of a mammalian 8-oxoguanine DNA glycosylase.
A; Reference number: 208708; MUID:97352815
A; Accession: T46962
A; Status: preliminary; translated from GB/EMBL/DDBJ
A; Molecule type: mRNA
A; Residues: 1.345 <ROS>
A; Cross-references: EMBL:U96711; NID:g2078295; PIDN:AAB81133.1; PID:g2078296
C; Genetics:
A; Note: mogg1
C; Function:
C; Function:
A; Description: removes mutagenic base 8-oxoguanine, formed by oxidative DNA damage, by C; Superfamily: mouse 8-oxoguanine DNA-glycosylase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Description: removes mutagenic base 8-oxoguanine, formed by oxidative DNA damage, by Superfamily: mouse 8-oxoguanine DNA-glycosylase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö

chilin synthase (EC 2.4.1.16) CHS2 - yeast (Candida albicans)
C; Species: Candida albicans
C; Species: Candida albicans
C; Date: 19-War-1997 #sequence_revision 19-Mar-1997 #text_change 20-Aug-1999
C; Accession: $20538; A38192; Bowen, A.R.; Robbins, P.W.
Mol. Microbiol. 6, 497-502.1992
R; Title: Expression of chilin synthase genes during yeast and hyphal growth phases of Ca A; Reference number: $20538; MuID:9219994

CHANNEL PROTEIN RECTIFICATION DIRECTION RESULTS FROM POTASSIUM
-!- FUNCTION: PH-DEPENDENT, VOLTAGE-INSERIJIVE, BACKGROUND POTASSIUM
-!- CONCENTRATION ON EITHER SIDE OF THE MEMBRANE. ACTS AS AN
OUTWARD RECTIFIER WHEN EXTERNAL POTASSIUM CONCENTRATION IS LOW.
OUTWARD RECTIFIER WHEN EXTERNAL POTASSIUM CONCENTRATION IS LOW.
-!- SUBCELLULAR LOCATION: INVEGRAL MEMBRANE PROFIEN (POTEMYIAL).
-!- TISSUE SPECIFICITY: WIDESPREAD EXPRESSION IN ADULT. STRONGEST
--- TISSUE SPECIFICITY: WIDESPREAD EXPRESSION IN BRAIN.
-!- MISCELLANBOUGS: INHIBITED BY EXTERNAL ACIDIFICATION. ACTIVATED BY
HALOTHANE AND ISOFLIRRANE.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Duprat F., Lesage F., Fink M., Reyes R., Heurteaux C., Lazdunski M.; "TASK, a human background K+ channel to sense external pH variations
